

# You're in Control: Discover the Full Data on your Data

Cognigo uses Cognitive Computing to extract, map and categorize all of the structured and unstructured data of your organization. We solve the most complex challenges in data governance, security and compliance, providing you with full visibility and control over your data. It's the fastest, most precise and scalable solution to take charge of your data.

## Challenge

- Do you have a comprehensive view of all structured and unstructured data assets in silos across your organization?
- Do you actively enforce your data governance policies to monitor and address violations?
- Do you have a scalable approach to cloud migration, document classification and data integrity?
- Do you have a rigorous strategy for upcoming compliance requirements such as GDPR?

If you answered “no” to one of these questions, then you need DataSense, the groundbreaking AI-driven data management solution.

## Use Cases

Cloud Data Migration

Data Protection

GDPR Compliance

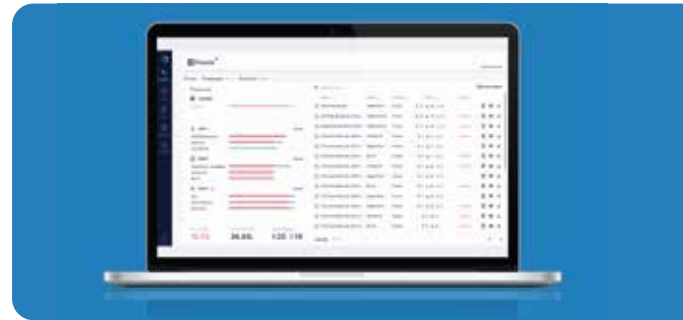

Data Forensics and Audit

Data policy enforcement

## Solution

DataSense generates the most comprehensive insights into your structured and unstructured data silos. Leveraging state-of-the-art AI algorithms, DataSense develops human-like understanding of each document and database—at scale, providing you with unparalleled visibility and out-of-the-box data governance policy implementation.

### DataSense works in 3 simple steps:

#### IDENTIFY

DataSense scans your data remotely, supporting all common protocols. Then, the AI algorithms automatically recognize and categorize structured and unstructured data across file repositories, databases and cloud services.

#### ASK

By creating a powerful, centralized index, and leveraging a native “Google-like” search engine, DataSense provides answers to your most critical data security and business-related questions. Discover data violations, potential breaches and compliance issues with a single pane of glass.

#### ORCHESTRATE

By leveraging out-of-the-box policies, DataSense instantly identifies potential security and compliance risks to automate actions such as alerts, file tagging and encryption. It helps you maximize the return and enhance the capabilities of your existing infrastructure by integrating with the organization's SIEM, DLP, IRM and more

## Benefits

**Unified visibility.** Review all of your data under one pane of glass, to discover previously hidden insights. We provide full coverage of all your file repositories, databases and cloud services.

**Fast.** Our AI algorithms can process your data faster and at scale, cutting the time to insights discovery by 70%, as compared to other solutions.

**Cost efficient.** By leveraging AI, we dramatically reduce the need for human involvement, giving your team more time to handle strategic, higher value tasks.

**Accurate and scalable.** Self-learning AI algorithms significantly increase accuracy and business agility, as compared to rule-based data processing.

**Confidence.** DataSense enforces data governance policy and helps you protect billions of sensitive records. We protect you by safeguarding your customers' data.
